

FMCGs to prioritise packaging in 2024 or run the risk of losing customers

 By [Gisela Kruger](#)

15 Jan 2024

Packaging is not merely essential for ensuring safe access to food and beverages, but done correctly, can help minimise food waste, and preserve the quality of our natural resources. From a global point of view, the [FMCG](#) packing industry which while anticipated to surpass \$1m by 2028, is known to be influenced by consumer preferences and technological advances. The latter will continue to fuel shifts in the market making it a very competitive landscape where brands with the ability to innovate with agility will edge the opposition.

Gisela Kruger, Communications Manager at Danone Southern Africa

As the world continues to demand more sustainable solutions from the food industry as a whole, here are some of the differentiating trends to consider:

Sustainability and environmentally friendly packaging

Sustainable packaging isn't just a trend, it's an opportunity for differentiation and a necessity to future proof businesses.

According to a global survey [by McKinsey](#), consumers across the socio-economic sphere are becoming increasingly concerned about the environmental impact of product packaging and the attraction to purchase from brands with sustainable packaging options will continue to grow.

Certainly, as consumers become more informed about climate change, and the role packaging plays in exacerbating these effects, they will want to align with brands and products who are taking steps to mitigate the impact on the environment end-to-end.

Functionality and design

Consumers are drawn to convenience, aesthetics and functionality when it comes to packaging. Packaging still needs to serve the needs of the consumer, and living in an era of instant gratification combined with the fast-paced life we are experiencing; consumers will always consider ease of use and design appeal.

Brands therefore have to consider functionality and design ahead of creative. Is the packaging easy to open and use? If a customer is on the go, portion consideration is key and, of course, the nutritional information needs to be clear and easily understandable.

These are just a few considerations when it comes to packaging design vs aesthetics.

Recyclability

The third point also pertains to the sustainability lens. Businesses that use plastic for packaging food have a responsibility to embrace sustainable solutions, promoting the transition to circular and low-carbon packaging systems that recover as much packaging as they introduce to the market.

In an effort to be a responsible corporate citizen, Danone is determined to play a role in overcoming systemic barriers and accelerate progress towards a circular, low-carbon economy of packaging. In 2022, Danone joined the Business Coalition for a Global Plastics Treaty. This new coalition led by WWF endorses a common vision to end plastic pollution. In order to make a meaningful and lasting impact, FMCGs and retailers need to collectively assume responsibility and act.

Recycling resources

In addition to the recyclability of product packaging, corporates need to be responsible for the recyclability of resources as well. Take water for example. While not traditionally associated with packaging, it is a fundamental resource in the process and is essential to all life on the planet.

Including essential practices like grey water projects and regenerative agriculture means that companies are becoming more and more conscious of their impact across the value chain and are also able to make mitigating.

It is this shift in mindset and a focus on driving a circular economy within the packaging industry that will truly drive sustainability.

There is no doubt that brands that focus on developing ethical and sustainable packaging that not only benefit the bottom-line, but speak to the needs of the changing consumer preferences and that protect or support the environment will be the ones that shape the industry going forward.

By embracing sustainable practices from farm to spoon, not only do we preserve and renew our planet's resources but also strengthen our bond with our consumers and add to a prosperous future for the food industry.

ABOUT GISELA KRUGER

Gisela Kruger is the Communication Manager and Business Integrator (BCorp) at Danone Southern Africa. She operates as part of the extended leadership team and within a very lean corporation has allowed her to move beyond the standard communication role and refine her skills as project manager on multiple campaigns.
